

Model: Holiday Synth Rev: 1

- * The Holiday Synth is a unique four oscillator drone synth
- * Each oscillator has its own frequency (pitch) control, volume control, and photocell (light sensitive frequency control)
- * The oscillators are summed to the master volume control and then routed to the 1/4" output jack
- * Oscillators 2 and 4 can be synchronized (sync.) by oscillators 1 and 3 respectively
- * This unit runs on a standard Boss style 9V power supply (2.1mm center pin, center negative)

Notes:

- * Always leave the unit off when not in use
- * Turn master volume all the way down before turning the unit on
- * Please email Damon at marsynth@gmail.com for questions, comments, and service requests
